

Product code	010-0070
Part Number	MODULO MICRO USB PARA DESENVOLVIMENTO SWI
Product description	MODULO MICRO USB PARA DESENVOLVIMENTO SWI

Main features	microcontroller board stm8 programming
---------------	--

Technical specifications

1. Use STM8S103F3P6 as the master IC.
2. You can use 2.54 pin on the board or pad to take power to take power, to take power when using the pad, the input voltage range of 4.5V-15V, can output to the outside through pin 3.3V!  

Note: 5V input supply pin is connected to the module.
3. leads to all pins, the pins next to the pin marked the label, with a reset button, power LED, and the program demonstrates the lights, small but perfectly formed.
4. Support SWIM debug mode

Dimensions

4x30x18mm

Weight

2.6g
