

Product code

010-0412

Part Number

MODULO ARDUINO MOSFET PWM DE ALTA POTENCIA 30A-36V-400W - D4184

Product description

MODULO ARDUINO MOSFET PWM DE ALTA POTENCIA 30A-36V-400W - D4184

Products Description

D4184 MOS MODULE MOSFET control Module Field effect MODULE

Module features:

With the decoupled isolation, the control signal and the controlled equipment are isolated, which greatly increases the interference.

High level start, low level stop, PWM speed adjustment

It is widely used in the control of electric motors and stop, electromagnetic valve and other tributary devices

There are various specifications of MOS tube to provide selection,

For example,

FR120N: 100 v 9.4 A

LR7843:30 v 161 a

AOD4184:40 v 50 a,

6. The signal input side can solder the terminal or pin, and be compatible with the bread board

7. Output can be soldered terminal or direct welding line

8. The module size 23mm X 16mm has two 2mm diameter screw holes, and the hole spacing is 8mm

Packing list

1X MODULO ARDUINO MOSFET PWM DE ALTA POTENCIA 30A-36V-400W - D4184

Dimensions

23mm X 16mm

Weight
